

PFAS Declaration

- LUX-IDent s.r.o. is committed to compliance with government regulations and industry standards for the environmental health and protection as well as continually striving to meet the needs of our customers.
- Per- and polyfluoroalkyl substances (PFAS) are a group of synthetic chemicals made up of a chain of linked carbon and fluorine atoms. Because the carbon-fluorine bond is one of the strongest, the long-chain PFAS accumulate in humans, animals and sediment/soil, the short-chain PFAS accumulate in the environment due to their persistency and high mobility in air and water.
- PFAS are used in a wide variety of consumer products and industrial applications because of their unique chemical and physical properties, including oil and water repellence, temperature and chemical resistance, and surfactant properties. PFAS have been used in firefighting foams, non-stick metal coatings for frying pans, paper food packaging, creams and cosmetics, textiles for furniture and outdoor clothing, paints and photography, chrome plating, pesticides and pharmaceuticals.
- **Based on our production knowledge and declarations collected from the upstream supply chain, we hereby declare that our products do not contain any intentionally added PFAS chemicals.**
